# OpenHand™ Compatibility List

## General Compatibility

OpenHand supports the following computer, PDA and mobile phone operating systems:

Microsoft™ Mobile 5, Pocket PC 2003

Microsoft™ Mobile 5 (Portrait QVGA **ONLY** although **some** VGA screen devices also work), Smartphone 2003.
(N.B. Tasks not supported due to user indifference for this feature)

Microsoft™ Windows 98, ME, 2000, XP

Palm™ 5.X and above.   N.B. Palm OS does not support multitasking.

Symbian™ 7 and 8 including:

Nokia Series 60 V2.X

Nokia Series 80

UIQ 2.X

Symbian™ 9.X:

Nokia Series 60 V3.X

OpenHand does not support:

JAVA MIDP(x) handsets

Microsoft Pocket PC 2002 or older

Microsoft Mobile 5 Landscape orientated screen devices

Palm 4.X or older

Symbian ™ 6.X is **NOT** supported (These are very old devices and are no longer manufactured)

Symbian ™ 9.1 UIQ V3.X due to low volumes and late shipment of devices from Sony Ericsson

Non GPRS/3G/HSDPA/CDMA etc devices require a connection to the internet via one of the following:

Bluetooth / cable / infra red connection to a (H)CSD / GPRS / EDGE / 3G(UMTS) / (W)CDMA / HSDPA / TETRA etc data enabled handset

Bluetooth Personal Area Network (with internet gateway)

Broadband (Leased lines, SDSL, ADSL, Cable)

Ethernet cable (with internet gateway)

Dial up (POT) connection

Satellite (Iridium, Inmarsat and others) with a data account

Token Ring (with internet gateway)

WiFi a,b,g (Wireless LAN) (with internet gateway when outside the corporate network)

## Testing

Whilst OpenHand tests on many types of handsets from the major manufacturers, it is impossible to test every single device / firmware / network combination.  The compatibility list is shown for guidance only.  The first part of the document lists devices that OpenHand believes should work with the latest client (Section 1 only).  OpenHand would always suggest testing a single handset under your network's 14 day return policy before standardising on any particular handset or PDA.

## International / Overseas Roaming

**IMPORTANT**:  Most network operators have substantially different charging mechanisms when data is used abroad.  OpenHand would **strongly** suggest users review the charges of their operator before going overseas.  In particular look in your operators' Terms & Conditions for minimum data connection charges at a much higher data charge (typically 300kb per connection rather than 1kb, which will substantially increase roaming costs).

For instance 1KB of data at £1 per MB in the UK will cost £0.001 (a tenth of a penny), in Europe 1KB will be charged at 300KB at £8 per MB which will cost £2.40!

The use of local SIM cards and WiFi is recommended until data roaming prices are regulated.  For this reason we would also recommend switching off automatic mail checking when abroad.

EDGE is not supported by UK networks nor many international networks.  Roaming using EDGE data connectivity may be problematic.

## 3 Network

The **3** ™ network has launched new tariffs allowing users to 'break out' of the walled garden of services previously offered.  OpenHand has now tested compatibility with this network and has found a limitation with the Mobile Web Sites tariffs.  As 3 ™ block all non web traffic and also apply protocol filters, only Port 443 can be used with OpenHand not 10622.  This restriction should not apply to the more expensive Wireless Web tariffs.  Please note that only 3 ™ handsets would be supported (GPRS handsets and connecting via GPRS whilst outside of the 3 network will most probably fail).

## T-Mobile

**T-Mobile** ™ has recently introduced new unlimited data tariffs (June 2006) that may restrict the use of applications such as voice over IP.  OpenHand does not know what the effect of such restrictions will be but we have not had any problems reported, yet.

## Document readers and editors

Whilst many devices include document, spreadsheet, Adobe® and presentation readers and editors, some do not (typically Microsoft Smartphone based devices).  The capabilities of these editors are obviously limited due to the devices' low cost, small screens, low processor power and limited and slow dynamic memory (though not semi permanent memory).

These devices, generally, are not able to open password protected Microsoft Word® documents (a rarely used feature) and may have limited ability to open or edit tables.  Complex charts and graphics in Microsoft Excel® documents may not be rendered in part or full.  DataViz DocumentsToGo appears to offer wider support for embedded tables on Symbian and Palm devices.  Word and Excel editors in Pocket PC Mobile 5 also offer better document editing than previous versions.

Westtek (www.westtek.com) offer a full suite of readers, not editors, for Microsoft ™ Smartphone devices.

# Handset, PDA & Laptop (GPRS/3G) availability – sorted by availability

## Available devices with OpenHand client compatibility (Section 1)

| Handset | Picture | Operating System | Network | Availability |
